

AMENDMENTS TO THE PATENT**Specification:**

Page 34, paragraph [004] the fourth sentence, replace with the following new sentence:

The circumference of the inner hole of the top plate **946** is slidably engaged with the outer circumferential surface of the upper valve guide **962** so that the top plate **946** can slidably move upwardly and downwardly along the vertical axis of the valve guide **962**.

Listing of claims will replace all prior versions and listings of claims in the application.

LISTING OF CLAIMS

1. (Canceled)

2. (Currently Amended) The dual flush toilet system according to claim 1, A dual flush toilet system for selectively flushing solid waste or liquid waste, said dual flush toilet system comprising:

a water tank with a discharge opening on the bottom of said water tank for storing and receiving water;

a toilet bowl located below said water tank and connected to said water tank by said discharge opening;

a spud having an elongated upstanding body with a lower end secured on said discharge opening of said water tank;

a flush valve comprising a tubular element upstanding and extending above the water surface in said water tank and slidably engaged with said spud, a float chamber attached on the lower portion of said tubular element, and a ring attached at the upper portion of said tubular element; and

engaging means connecting said flush valve and a support for engaging the movement of said flush valve to perform a full flush operation or a partial flush operation to flush wastes in said toilet bowl,

wherein said engaging means engages said flush valve with both vertical travels and rotations vertical and rotational movement about a vertical axis.

3. (Currently Amended) The dual flush toilet system according to claim 1, A dual flush toilet system for selectively flushing solid waste or liquid waste, said dual flush toilet system comprising:

a water tank with a discharge opening on the bottom of said water tank for storing and receiving water;
